

Fullstack Engineer, Backend Engineer (Remote)

SUMMARY

Building a mortgage lender is incredibly difficult — it requires a lot of time + money with significant operational complexity. We are creating software and financial infrastructure to make building an integrated mortgage experience easier.

Mission: Unlock homeownership across the web.

COMPANY OVERVIEW

Seed stage technology company building the software infrastructure to allow other companies to build mortgage lending into their platforms. Using API and White-labeled URLs to work with the top 5 national lenders.

POSITION OVERVIEW

The Mission

We are unlocking the largest asset class in America - mortgage. Today, building a mortgage lender is expensive, time-intensive, and operationally complex. We are standardizing these inputs via software. We believe the infrastructure layer in a mortgage is long overdue. If you do, too, come join us.

We have previously worked at companies like Stripe, Instabase, Better, Databricks, Compass, and Palantir. We are backed by Conversion Capital, QED, Fifth Wall, Village Global, Peter Thiel, Naval, the cofounders of Ramp + Blend, and many more.

The Role

We are looking for a senior fullstack engineer who is driven by building high-quality products. You will work closely with our design, product, and mortgage teams to shape the product we give to our customers.

Some of the technical problems you would work on include:

- Building customer-facing APIs
- Building embeddable, white-labeled UI elements
- Building an underwriting and pre-approval engine for loans
- Deep integrations with final funding partners
- Our ideal candidate may have specialties in some of these areas but is comfortable operating across all parts of the stack and building end-to-end features.

Desired Skills

- 5+ years of professional software engineering experience
- Production experience building web applications. Preferably with React, TypeScript, and Node
- Experience building and scaling backend systems on cloud infrastructure
- Track record of solving complex engineering problems

- Care deeply about product experience and are driven to put great products in the hands of users
- Willing to own projects and products end-to-end
- Can work with our product and mortgage teams to translate mortgage requirements into the product
- Excited about joining a small, high-growth team and tackling large open-ended problems
- Experience building and scaling APIs at Fintech companies (preferred)

Our Tech Stack

Front End: React + Redux + Typescript

Back End: Postgres + TypeScript + Node + NestJS

Infra: AWS - Fargate + ECS + Docker

Benefits

- Healthcare - 100% paid medical, vision & dental with support for dependents
- 401k - with employer contributions coming soon
- Unlimited Time Off - be on when you're on and off when you're off
- Hardware Allowance - \$2,000 to fix up your workspace or join a co-working space
- Annual Off-sites - fully paid for team off-sites in beautiful corners of the world
- Anything else you're looking for? Let us know as we are rapidly evolving!
