

Fullstack, Frontend Engineer (Remote)

COMPANY OVERVIEW

Content-aware solution for discovering and monitoring personal data to automate enterprise data privacy and security. Empowers companies to be better custodians of the customer data they hold in an increasingly privacy-aware world. Our technology gives them something they've never had before: content awareness and continuous observability and protection of the structured and unstructured personal data that the company processes across clouds. We're building the unified platform underpinning the new privacy stack and looking for people who are passionate about data, privacy, machine learning, and distributed systems to join us in our mission.

POSITION OVERVIEW

We're looking for front-end engineers to help build out our user experience that helps companies discover, understand, and visualize sensitive data across their entire infrastructure. Our ideal candidate has a passion for visualizing data and making complex tasks easy to accomplish.

About the Role

- Given an initial design and technical plan, consistently deliver an end-to-end new product feature
- Collaborate with other engineers to scope product requirements and write technical specifications
- Be shockingly efficient and results-driven to deliver software improvements to our users
- Produce high-quality, production-ready, readable, maintainable code

Our Principals

- The founders have a strong data & security background and have worked in various roles at places like Vontu/Symantec, Lookout, Trifacta, Fidelity, and others. We saw companies struggle with legacy approaches to managing their personal data as privacy regulations arrived and launched Divebell with the mission of giving them a tool that automates away these processes and helps them become better custodians of the personal data they hold
- We are passionate about data privacy and believe in a culture of humility, transparency, and constant learning and improvement. Having worked at several startups in the past, we also appreciate the long-term value of a work/life balance, even in a startup environment

You Have

- Fullstack position with front-end focus
- Preference for Angular experience, but React, Ember, and Vue are also acceptable
- Ability to make architectural decisions and lead projects
- Comfortable being the primary point of contact for a project
- Startup or small company experience preferred (almost must have)
- Not a lead or manager position, will be expected to spend significant time coding as an individual contributor

Our Tech Stack

Java, Scala, Angular, Postgres, TypeScript

Benefits and Perks

- Unlimited PTO
- 100% Health coverage for employee
- 100% Dental for employee
- 100% Vision for employee
- Life and disability insurance
- HSA and FSA
- 401K, but no matching
- Home office: Employees can expense everything they need for their work (we provide the laptop) but monitors, peripherals, desk, chair, or anything else you need can be expensed or can be provided
