

Senior Frontend Engineer (Hybrid)

COMPANY OVERVIEW

Building a service where non-technical professionals can identify and deliver the critical data they need into the tools and formats they are familiar with so that they can focus on their analysis and recommendations without delay. Access to new data or queries typically involves engaging the engineering team to provide new tools or services. This can greatly delay the availability of information for analysis, recommendation, and decision-making. The company will eliminate this delay by automating the process from requirement definition to delivery of the data.

POSITION OVERVIEW

We're building a connected spreadsheet from the ground up to make it easy for non-technical users to access and work directly with their data.

In an increasingly data-driven world, every company has a huge bottleneck for developer resources to build custom software and query data. Unlike other no-code or business intelligence products, we don't force users to learn a new paradigm. Everything ends up getting dumped into a spreadsheet where the real work happens anyway, so we decided to start there.

About the Role

You've built front-ends before - but never quite like this. If you share our passion for taking the browser further than ever toward a native-feeling experience, all while advancing maintainable code standards - come push the boundaries of your skills with us to the cutting edge.

This role will come to own some or all of the following horizontal concerns:

- The architecture of our presentation layer and core React component library. Set the standard for how we write React code in a clean, consistent, and lightweight way
- Acting as resident React arcanist - streamlining our render loop with the deep magics of reflective equalities, reconciliation hacking, and upcoming Concurrency API
- Constructing a NextJS content management pipeline for SSR'ing and delivering thousands of apps and assets to the edge
- Laying down a powerful, non-blocking, event-driven, multi-web worker state management layer to foster live collaboration over WebRTC, and more

In addition, you'll come to know some additional ancillary responsibilities:

- Come take the initiative - you're empowered to spin up your own projects and own them from start to finish
- On an as-needed basis, enhance our TypeORM + Apollo GraphQL API

Our Principals

We're hackers at heart

We're obsessed with design

We let our work do the talking

You Have

React Expert

Either degree from a top-ranked school or experience working at top-tier technology companies (software as the main product, not retailers or banks, for example)

High energy and strong communication skills (these are common reasons for the initial screen rejection).

GrapLook for people with early-stage startup experience who can work independently without needing directions. If you have no early startup experience, please include in your write-up why this candidate will be successful as the first engineer.

Benefits and Perks

- Full medical, dental, and vision insurance
- Competitive cash salary with meaningful equity
- New laptop and any other equipment that you need to work comfortably
- 401(k) contribution, gym benefits, and lots of healthy(ish) snacks
